DNA for ID solutions

MTCOS® eDriving License

**The high performance application
for eDriving Licenses**

ISO/IEC 18013
EU Commission Directive 383/2012

3 ID Applications

2 MTCOS® ISO / IEC 7816 API

1 MTCOS® kernel

0 IC (5 architectures)

MTCOS® eDriving License

High security application for
electronic driving licenses.

MTCOS® with built-in eDriving License application has been rolled out in several large volume national projects and with several million documents in circulation. For a cost effective and flexible procurement process of all further system components, the documents are strictly designed according to the ISO/IEC 18013 standard.

Like the coding system of DNA, MTCOS® secures the personal data of the document holder for an encrypted, wireless transmission and guarantees a unique and swift identification. In only a few seconds, MTCOS® verifies whether the attached system is allowed to have access to the personal and/or biometric data of the document holder. If so, MTCOS® encrypts this data with strong session keys for messaging and then sends it to the system.

To guarantee an ultra-fast and simultaneously ultra-secure procurement, MaskTech offers a platform-/chip-independent and globally proven eDriving License application which stores, secures and manages the data saved on the chip of an electronic driving license.

Security & Support in every phase

Challenges to be met – 4 key points

- 1 Individual and generic personalization infrastructures**
MTCOS® supports the life cycle model specified by Common Criteria for the production process of modern electronic documents. All data communication is completely encrypted. Unauthorized access is prevented by transport keys.
- 2 Customer-specific features**
MTCOS® can be upgraded at customer's request during the passport production life cycle. Individual changes are loaded fully encrypted during the OS setup by using a Common Criteria-certified loading mechanism.
- 3 Variety of cryptographic procedures and security levels**
MTCOS® supports a variety of cryptographic protocols. Further customer specific crypto procedures can be loaded securely in initialization phase. On request we develop project-specific masks, if required with Common Criteria certification.
- 4 Multiple configurations**
MTCOS® can be configured to meet ISO/IEC 18013 configuration, depending on our customers choice.

Individual Configuration

MTCOS® eDriving License masks

Our core expertise and products cover embedded software development and corresponding Common Criteria certification – if required, application-specific product extensions and setup of MTCOS® in complex security environments.

MTCOS® is a chip-independent multi-application operating system – ready to be integrated into any eDriving License personalization and manufacturing infrastructure.

MTCOS® PRO

IFX SLE78 CLFX series (MTCOS® PRO V2.5, EAL5+)

IFX SLE37 CLFX series (MTCOS® PRO V2.5, EAL5+)

NXP P71D352 (MTCOS® PRO V2.5, EAL5+)

STM ST31G480 (MTCOS® PRO V2.5, EAL5+)

MTCOS® FLEX ID

IFX SLC36 (MTCOS® FlexID V2.5)

STM ST31P450 (MTCOS® FlexID V2.5)

MTCOS® Flex ID
is our choice for cost
efficient projects
with adequate memory
and data processing
needs.

Flexibility

In an individual configuration, security protocols can be chosen from a list of proven protocols, in particular PA, BAC, SAC/PACE, AA and EAC.

Project-specific extensions

Possibility to add and adjust data group files with individual sizes, depending on national security standards.

Customer-specific features

Addition of customer-specific add-ons, functions and application directories during the init- and pre-personalization phases.

Beyond the mere eDriving License application

Product procurement,
product dependancies

Availability

MTCOS® is available on multiple semiconductors from different manufacturers. We offer hardware ports to chip platforms with the best price-performance ratio.

Compatibility

Support of important international standards such as ISO/IEC 7816, ISO/IEC 14443. Open design free of thirdparty rights and license costs.

Our Approach

Technological competence & reliability

Full support for maximum security
in your individual project

We offer:

- 1 Full independence** through triple sourcing – MTCOS® is EAL5+ certified on chips from three different hardware manufacturers.
- 2** We have been keeping up with **all interoperability and performance tests** in the industry to keep our products ahead of others.
- 3 MTCOS® is an all-inclusive package:** Already included functionalities can be activated at a later point in time.
- 4 Our experience is your benefit:** We suggest or jointly develop the best suitable eDriving License layout (data structure) for your individual project.
- 5 Full flexibility and interoperability:** No matter which security chip, delivery form, design, antenna, inlay, data page, eBooklet... you choose, MTCOS® is ready for immediate integration (including already established personalization and manufacturing infrastructures).

MTCOS® applications Overview

MTCOS®
eTachograph

MTCOS®
ePassport

MTCOS®
eResidence Permit

MTCOS®
eID

MTCOS®
eHealth

MTCOS®
ePayment

MTCOS®
Customised

Checklist for eDL projects

MTCOS® eDL chip options:
MTCOS® supports cryptographic chip-sets with contact-, contactless- and/or dual interface.

Apart from meeting international standards for electronic driving license documents, MTCOS® supports a variety of cryptographic protocols with key lengths meeting present and future security demands.

MTCOS® & Passive Authentication

The data are protected with an electronic signature guaranteeing integrity and authenticity.

MTCOS® & BAP

The Basic Access Protection mechanism (BAP) protects personal driving license holder data against unauthorized reading attempts and prevents skimming as well as eavesdropping by encrypting the communication between chip and terminal.

MTCOS® & AA

Active Authentication (AA) ensures that the driving license is not a copy of another driving license.

MTCOS® & EAC/EAP

Fingerprints and other sensitive data may be stored on the driving license's chip. The Extended Access Control and Extended Access Protection procedures strongly secure these data against unauthorized reading and copying in addition to the basic protection mechanisms. Compared to EAC, EAP allows protecting up to 24 data groups.

MTCOS® & SAC/PACE

The new Supplemental Access Control (SAC) also known as Password Authenticated Connection Establishment (PACE) protocol is an alternative to BAP that offers advanced resistance against skimming and eavesdropping of the driving license. SAC/ PACE provides strong session keys independent of the input string's (e.g. MRZ or Card Access Number) entropy.

MTCOS® & Security

MTCOS® implements a unique Anti-Skimming procedure to prevent the unauthorized reading of the eDriving License by brute-force attacks.

MTCOS® & Privacy

MTCOS® uses a random identification number (UID/PUPI) that is changed automatically with every new reading operation making tracking of the driving license holder or compilation of a user profile impossible.

MTCOS® & Cryptographic protocols:

Passive Authentication

Basic Access Protection

Active Authentication

Extended Access Control

Anti-skimming software

Extended Access Protection

SAC/PACE

3DES cryptography

AES cryptography

Global Platform

RSA cryptography

Elliptic-curve cryptography

Data Privacy

Support of all DGs

MTCOS® & Standards:

ISO/IEC 7816 - 3, 4, 6, 8, 9, 15

ISO/IEC 18013 - 1-4

ISO/IEC 18013 - BAP Config 1 ... 4

ISO/IEC 14443 Type A or B

MTCOS® & Personalization:

ISO/IEC 4-Stage life cycle manager

Transport key protection with SAM & HSM

Global Platform

Fast personalization mode

About MaskTech

MaskTech is an independent company specialized in the development of high-security card operating systems. We provide MTCOS®, our MaskTech operating system, and various included applications for the electronic document and authentication market as license or as a chip and OS package.

Ever since our first ICAO-compliant application in 2004 to the implementation of the latest LDS 2.0 specification, we always work enthusiastically to provide our customers the safest and fastest electronic document solution on the market. Founded in 2002, MaskTech has gained an outstanding reputation for innovation and state-of-the-art

technology in the electronic documents sector. Due to many years of experience and our excellent network in every step of the eDriving License production and issuance chain, we can meet our clients' specifications, adding know-how to their portfolio if necessary.

Our product range includes generic and customized applications for chips of the leading security semiconductor manufacturers as well as security certification services. To date, MTCOS® protects more than 400 million eDocuments around the globe. The independent company has its headquarters in Nuernberg, Germany.

MaskTech Testimonials

MTCOS® is one of the most frequently used smartcard operating systems for eID documents. More than 65 countries worldwide have issued their ID and travel documents with MaskTech's secure OS.

MaskTech's MTCOS® is embedded in 45 countries' ePassports worldwide and more than 20 countries' eHealth, eResidence Permit, eNational ID, eDriving License, welfare and authentication solutions in a unique variety of configurations and infrastructures.
